

Tel Aviv University doctoral thesis format

The doctoral study will be summarized in a scholarly work written according to practices, terminology and rules of citation accepted in the relevant professional literature. The structure of the thesis should follow these guidelines:

- 1) Cover Page: Tel Aviv University logo, listing in order the academic unit, the title of the work, the student, the supervisor and the following sentence: "Thesis submitted for the degree "Doctor of Philosophy" by (name)" Submitted to the Senate of Tel Aviv University (date)." The cover page must appear both in Hebrew and English.
- 2) Acknowledgments. This may be added after the review process.
- 3) Table of Contents
- 4) Abstract: written in Hebrew and English and succinctly summarizes the work and research conclusions.
- 5) Lists of abbreviations, symbols, illustrations and tables, as is customary in the field of research.
- 6) Introduction: reviews and summarizes what is known in the scientific literature and presents the research questions. The study's objectives and premises will be described, highlighting the study's scientific contribution.
- 7) Research methods: where relevant, will include a chapter which describes methods used, with an emphasis placed on novel methods developed or modified during the course of the research.
- 8) Results: will be presented in one or more chapters.
- 9) Discussion and summary: will include a discussion on the research and its novel findings, conclusions, potential further research and other developments that may derive from the current work, in accordance with the practice in the field.
- 10) Bibliography: The chapter will include full bibliographic details of literature and other sources cited in the thesis. The list will be formatted as is customary in scientific publications in the field.

A published article shall not be incorporated into the thesis, as is. One may include manuscripts published or accepted for publication as appendices to the thesis.

If there are multiple chapters describing results, the relevant methods should not be repeatedly described in those chapters but rather concentrated in the chapter on methods. In a similar manner, all bibliographic listings should be included in the final chapter and not distributed in other chapters.
